

TASK-3

The relay should be turned on when the ultrasonic sensor measures a distance within 30 cm (Threshold) .

The Wiring Guide

Ultrasonic Sensor (HC-SR04)

VCC	ESP32 WROOM Pin	Notes
GND	5V / VIN	Power for the sensor
Trig	GND	Ground
	GPIO 5	Output from ESP32 to trigger pulse
Echo	GPIO 18	Input to ESP32 (Use voltage divider here!)

Relay Module	ESP32 WROOM Pin	Notes
VCC	5V / VIN or 3.3V	Depending on your relay board spec
GND	GND	Ground
IN	GPIO 19	Controls the relay switch

MicroPython Code

```
import machine
import time
```

```
# --- Configuration ---
```

```
TRIGGER_PIN = 5
```

```
ECHO_PIN = 18
```

```
RELAY_PIN = 19
```

```
THRESHOLD_CM = 30.0 # Distance threshold in cm
```

```
# --- Pin Initialization ---
```

```
trig = machine.Pin(TRIGGER_PIN, machine.Pin.OUT)
```

```
echo = machine.Pin(ECHO_PIN, machine.Pin.IN)
```

```
relay = machine.Pin(RELAY_PIN, machine.Pin.OUT)
```

```
# Ensure relay starts OFF
```

```
# Note: Active-Low relays turn ON when output is 0. Active-High turn ON when 1.
```

```
# If your relay behavior is inverted, change this to 0.
```

```
relay.value(0)
```

```
def get_distance():
```

```

"""Measures distance using the HC-SR04 ultrasonic sensor."""
# Ensure trigger is low
trig.value(0)
time.sleep_us(2)

# Send a 10 microsecond pulse to trigger
trig.value(1)
time.sleep_us(10)
trig.value(0)

# Measure the duration of the echo pulse
duration = machine.time_pulse_us(echo, 1, 30000) # 30ms timeout

if duration < 0:

    # If timeout occurs (return value -1 or -2)
    return None

# Calculate distance in cm
# Speed of sound is ~343 m/s or 0.0343 cm/us.
# Pulse goes there and back, so we divide by 2.
distance = (duration * 0.0343) / 2
return distance

print("Ultrasonic Relay Controller Initialized...")

# --- Main Loop ---
while True:
    dist = get_distance()

    if dist is not None:
        print(f"Distance: {dist:.2f} cm")

        # Check if an object is within the threshold
        if dist <= THRESHOLD_CM:
            print("Target detected! Turning Relay ON.")
            relay.value(1) # Set to 0 if using an Active-Low relay module
        else:
            print("Clear. Turning Relay OFF.")
            relay.value(0) # Set to 1 if using an Active-Low relay module
        else:
            print("Out of range or sensor error.")

    # Wait 500ms before the next reading to avoid flooding the sensor
    time.sleep(0.5)

```

NOTE:

THRESHOLD_CM =30 (Add this in the code)

RESULT: The ultrasonic sensor turns off when the object is detected beyond 30cm

```
